

Typical sealed Unit replacement

1. Working from the exterior remove the glazing bead around the sealed unit using a long blade utility knife to cut the silicone,
2. Using an exterior grade silicone place a 1/8" bead of silicone around the interior glazing of opening.
3. Install the new glazing beads using 1 or 1 1/4" brads or finishing nails. The glazing may have to be trimmed.
4. Fill any holes from the brads or nails with wood filler and touch up with paint or stain.
