FIT.

Fitting ear canals of all shapes and sizes doesn't have to be difficult.

The right earplug should feel comfortable in the ear canal without compromising protection. Howard Leight earplugs offer a combination of advanced design and material science that ensures the proper fit for every employee.

SELECTION.

Why so many earplugs?

Because people, their ears and their environments are all so different. Howard Leight® offers the widest range of styles to accommodate almost any situation.

PROTECTION.

Hearing protection only works when people use it.

Howard Leight® earplugs provide a range of Noise Reduction Ratings that target hearing protection without compromising overall employee safety.

Earplugs Fitting Instructions

Keys to Successful Hearing Protection with Earplugs

Honeywell
HOWARD
LEIGHT

1 Disposable

Roll-Down Foam

MAX®

With clean hands, roll the entire earplug into narrowest possible crease-free cylinder.

Reach over your head with a free hand, pull your ear up and back, and insert the earplug well inside your ear canal.

Hold for 30 - 40 seconds, until the earplug fully expands in your ear canal. If properly fitted, the end of the earplugs should not be visible to someone looking at you from the front.

Reusable

Push-In Foam

Trust Fit™

While holding the stem, reach a hand over your head and gently pull the top of your ear up and back.

Insert earplug so foam tip is well inside the ear canal. Use a gentle rocking motion while pushing earplug into ear canal to ensure a deep fit.

If properly fitted, the tip of the earplug stem may be visible to someone looking at you from the front.

Reusable

Pre-Molded Push-In

SmartFit®

While holding the stem, reach a hand over your head and gently pull top of your ear up and back.

Insert the earplug so all flanges are well inside your ear canal.

If properly fitted, the tip of the earplug stem may be visible to someone looking at you from the front.

Banded

Tension Fit

QB2®HYG

Position band under your chin as shown above. Use your hands to press the ear pods well into the ear canal using an inward motion.

Protection levels are improved by pulling your ear up and back when fitting as shown.

In a noisy environment, lightly press the band inward with your fingertips as shown. You should not notice a significant difference in noise level.

DOs and DON'Ts of Howard Leight Earplugs

Proper Fit

If either or both earplugs do not seem to be fitted properly, remove the earplug and reinsert.

Removal

Gently twist earplug while slowly pulling in an outward motion for removal.

Acoustical Check

In a noisy environment, with earplugs inserted, cup your hands over your ears and release. Earplugs should block enough noise so that covering your ears with your hands does not result in a significant noise difference.

WEAR

- Read and follow all earplug fitting instructions.

SELECTION

- Avoid overprotection in minimal noise environments - in selecting the best earplug for your situation, consider noise levels and your need to communicate with co-workers or hear warning signals on the job.

MAINTENANCE

- Prior to fitting, inspect earplugs or ear tips for dirt, damage, or hardness. Discard & replace immediately if compromised.
- For proper hygiene discard disposable earplugs after use.
- With proper maintenance reusable earplugs should be replaced every 2-4 weeks. Push In Foam earplugs should be replaced every 5 days.
- Wash with mild soap/water, pat dry or air dry, and store in a case when not in use.
- Clean regularly and replace ear tip pods every 2-4 weeks on banded earplugs.

THE ABC'S OF FALL PROTECTION

A typical Person Fall Arrest System (PFAS) incorporates three components, often described as the ABC's of fall protection. The anchorage connector, body support, and connecting device, when used together, form a complete system for maximum worker protection. But don't forget about the other components of any fall protection program; D: descent, rescue, and retrieval of a fallen worker; E: education, and F: fall protection for tools.

Fall Protection

Anchorages are a secure point of attachment. They must be able to hold fast under more than a ton of force generated in a fall.

Body support harnesses distribute fall forces over the upper thighs, pelvis, chest, and shoulders. They provide a connection point on the worker for the PFAS.

Connectors such as shock absorbing lanyards or self retracting lifelines connect a workers harness to the anchorage.

Descent and rescue devices are used to retrieve an injured worker or lower him to the ground.

Education is essential. We offer a variety of training and consultative services to fit your needs.

Fall Protection for Tools helps make work environments safer and more productive by reducing dropped object incidents

FULL BODY HARNESS APPLICATIONS

CSA STANDARD Z259.10 DIVIDES HARNESSES INTO 5 CLASSES:

CLASS A

PERSONAL FALL ARREST

Class A full body harnesses are designed to support the body during and after the arrest of a fall.

CLASS D

SUSPENSION AND CONTROLLED DESCENT

Class D full body harnesses are designed for suspension or controlled descent from a height.

CLASS E

LIMITED ACCESS (EVACUATION)

Class E full body harnesses are designed to support a worker in a position that reduces the worker's profile during passage through a limited access area.

CLASS L (LADDER)

LADDER CLIMBING

Class L full body harnesses are designed for use with fall restrict systems involving the use of a fall arrester that travels on a vertical lifeline or rail.

CLASS P

WORK POSITIONING

Class P full body harnesses are designed to position a worker during a work operation.

TYCHEM® 6000 COVERALLS

- A proprietary barrier laminated to a Tyvek® substrate
- Strong and lightweight, with broad chemical barrier
- Used for protection from chemical warfare agents
- Widely used by military first responders for weapons of mass destruction situations
- Taped seams, attached hood (respirator fit), front zipper closure, storm flap, elastic wrists and attached socks
- Colour: Grey
- Available in sizes small to 4X-Large

Applications: Because Tychem® 6000 garments are only available with respiratory fit hood, storm flap and taped seams, these garments are intended for domestic preparedness situations where the potential for exposure to chemical warfare agents exists. When the hazard assessment consists of potential for exposure to the FBI's Toxic Industrial Chemicals most likely to be used in a terrorist threat, we suggest consideration of Tychem® CPF 3 or higher protection since permeation data is available on a much broader spectrum of chemicals including chemical warfare agents.

HIGH-VISIBILITY STANDARD: CSA Z96

Hi-Vis apparel is a function of two parts – retro-reflective striping (most common is silver tape), and luminance of background material (generally fluorescent yellow-green or fluorescent orange-red).

CLASSES

Class 1

Apparel is a basic harness or stripes/bands over the shoulder and encircling the waist (stripes/bands only meet CSA standard). Can be Level 1, 2 and FR retro-reflection.

Class 2

Apparel is full coverage of upper torso – front, back, sides and over the shoulder (stripes/bands and background fabric both meet CSA standard). Can be Level 1, 2 and FR retro-reflection.

Class 3

Apparel is Class 2 apparel in addition to bands encircling both arms and legs (all stripes/bands and background fabric meet CSA standard). Must have Level 2 retro-reflection.

LEVELS

Level FR

This level allows for flame resistant garments with striping/bands where the total retro-reflective level is at 20% of the level 2 requirement (FR treated fabrics lose luster after treatment).

Level 1

Level 1 is a slightly lower performance level of the striping, but still requires the background material to meet CSA standards. Retro-reflective level is at 70% of the Level 2 requirement.

Level 2

Level 2 is highest level of retro-reflection and requires the background fabric to meet CSA Standards as well as the striping/bands to meet the highest coefficient level (the brightest level).

CLASS 1

CLASS 2

CLASS 3

Micro plasma weld

Resistance weld

Micro plasma welds create value. Links are stronger so the gloves wear longer. There is also a lower risk of contamination because, unlike resistance-welded mesh rings, micro plasma welded rings leave no gaps to trap soil.

PROTECT YOUR HANDS... USE THE CORRECT GLOVE FOR YOUR APPLICATION

POLYMERS

Naturally occurring and man-made polymers are essential building blocks of hand protection. Specific polymers protect workers from specific hazards. There is no ideal glove that works in every situation. Best® utilizes a variety of polymer coatings and fabrics, designed for a variety of tasks.

NEOPRENE (POLYCHLOROPRENE, CR)

Strong, durable neoprene gloves provide excellent protection from physical hazards such as cuts and abrasions and also provide excellent chemical resistance for protection from exposure to organic and inorganic acids. Neoprene gloves also provide excellent protection from many organic solvents, oils, greases and petrochemicals and resist degradation from ozone, sunlight and oxidation. In addition, neoprene remains functional and flexible at temperatures ranging from -10° to 300°F (-23° to 150°C).

Neoprene

NITRILE (ACRYLONITRILE-BUTADIENE RUBBER)

Nitrile, a versatile synthetic copolymer, is used to make a variety of gloves ranging from heavy-duty work gloves to ultra-thin medical and clean room gloves. Nitrile coating provides tough protection from physical hazards such as cut, puncture or abrasion. Nitrile-dipped gloves also provide chemical resistance to petrochemicals (especially fuels), oils, greases, pesticides and other agricultural chemicals while providing excellent dexterity.

Nitrile

VITON® (FLUOROELASTOMER)

Viton® provides excellent chemical resistance to fuels used in the aerospace industry. It provides excellent protection from exposure to aromatic hydrocarbons such as benzene, toluene or xylene. Viton® gloves are available in unsupported version only. For working with extremely hazardous chemicals such as carcinogenic or highly toxic chemicals, Viton® works where no other glove works.

Viton®

NATURAL RUBBER

Natural rubber, the most elastic substance known, is found in over two hundred plants including the rubber tree (Hevea Brasiliensis), the source of natural rubber latex used to manufacture gloves. Natural rubber is a flexible and soft, yet tough and durable coating that provides excellent protection from physical hazards and provides an outstanding grip. Natural rubber provides excellent protection from exposure to aqueous chemicals such as acids and caustics, and limited protection from alcohols and ketones. Natural rubber gloves do not hold up well in organic solvents, oils, greases or fuels such as kerosene or gasoline.

CAUTION: Natural rubber latex has been shown to cause allergic reactions in sensitised individuals.

Natural Rubber

PVC (POLYVINYL CHLORIDE)

PVC is an economical synthetic thermoplastic polymer that is exceptionally durable. PVC gloves provide excellent protection from limited chemical exposure and physical hazard protection. They are noted for being durable and function well in temperatures ranging from -30° up to 212°F (-34° up to 100°C).

PVC

BUTYL® (BUTYL RUBBER)

Butyl® rubber's tight molecular structure provides excellent chemical resistance to gases and ketones. Butyl® gloves are manufactured in unsupported version only and are used by the military for protection from chemical warfare agents. Butyl® rubber is severely affected by exposure to fuels and aliphatic and aromatic hydrocarbon solvents.

Butyl®

TYPES OF GLOVES

DISPOSABLE GLOVES

This category of unsupported gloves is generally characterised as a thin-gauge glove that is not intended for repeated use. They may have a donning agent such as powder or a polyurethane slip coating, or powder-free.

LAMINATED GLOVES

This special nitrile-coated fabric is made by transfer-coating the nitrile polymer onto a textured surface and then laminating the nitrile film onto Sanitized® poly-cotton fabric for superior comfort and flexibility.

IMPREGNATED GLOVES

This special nitrile or PVC-coated fabric is made by knife-coating nitrile or PVC directly onto Sanitized® cotton fabric.

SUPPORTED GLOVES

These gloves offer a polymer coating over a cotton, nylon or aramid liner. The textile substrate imparts adds strength and resistance to abrasion, cuts and punctures.

UNSUPPORTED GLOVES

These are polymer gloves with no textile lining. These gloves include heavyweight, medium weight or disposable gloves. They may be chlorinated or have a cotton flock lining for easier donning.

CUT RESISTANT GLOVES

This special category is characterized by the utility of the gloves and includes either polymer-coated gloves or special high performance yarns that are designed to impart cut-resistance or combinations of these.

FOOT PROTECTION

CSA Z195 PROTECTIVE FOOTWEAR

This National Standard of Canada deals with protective footwear and includes requirements for resistance against toe impact, sole puncture, electric shock, chainsaws, as well as requirements for static discharge and electrical conductivity. Footwear that has been certified by CSA group to the CSA Z195-14 standard is eligible to bear our Protective Footwear Certification Markings.

CSA CERTIFICATION MARK FOR CANADA

Indicates footwear is CSA-certified to Canadian national requirements

LABEL

DESCRIPTION

This serialized label indicates certification by CSA group and is only available through CSA.

LOCATION

This label will be side-stitched or heat-sealed inside the top of the tongue or inside the quarter lining of the right shoe.

CLASSES OF PROTECTION

One or more of these markings will appear on the outer side or the tongue of the right shoe

PROTECTION MARKINGS

SAFETY FEATURES

Indicates sole puncture protection with a Grade 1 protective toe to withstand impacts up to 125 Joules.

Indicates sole puncture protection with a Grade 2 protective toe to withstand impacts up to 90 Joules.

Indicates the footwear features a Grade 1 protective toe without sole puncture protection. A Grade 1 protective toe withstands impacts up to 125 Joules.

Indicates the footwear features a Grade 2 protective toe that withstands impacts up to 90 Joules.

Indicates chainsaw protective footwear. Prevents a running chainsaw from cutting all the way through the boot uppers, protecting the shins, ankles, feet and toes.

Indicates soles that provide resistance to electric shock. The certified footwear has electrical insulating properties intended to withstand 18 000 Volts and a leakage current not exceeding 1 mA.

Indicates soles that are static-dissipative. The test criteria are 10^6 to 10^8 Ohms. Note that SD footwear without toe protection will not have sole protection certified by CSA Group.

Indicates soles that are super static-dissipative. This protection feature is similar to SD, except the test criteria are 10^6 to 3.5×10^7 Ohms.

Indicates soles that are electrically conductive. Test criteria are 0 to 500 000 Ohms.

Indicates metatarsal protection for the complete dorsum (top side) of the foot. A metatarsal protector withstands impacts up to 101.7 Joules.

FIRE PROTECTION

CLASSES OF FIRE:

Fires are classified according to the material that is burning. Fire extinguishers are rated by the area each will cover for a particular class of fire. The higher the number, the bigger the fire area you can fight.

Note: Maintenance and recharging of all fire extinguishers should be performed by a qualified service company.

CLASS A fires are the most common. They involve ordinary combustibles such as wood, paper, cloth, rubber, a number of plastics, and other ordinary materials.

CLASS B fires are caused by gasoline, grease, oil, paint and other flammable liquids. Commonly strikes in warehouses and manufacturing plants.

CLASS C for live electrical equipment. Often occurs in computers, monitors, wiring and appliances.

CONVENIENCE & PROTECTION FACTORS

DOOR STYLE PREFERENCE

Whereas door style is usually chosen by preference, the Uniform Fire Code (UFC) mandates the use of self-closing cabinets. Cabinets with self-closing and self-latching doors provide an extra measure of protection.

Manual

Economical manual-close doors permit doors to open a full 180°. When pushed closed they will automatically self-latch.

Sliding

A single bi-fold, sliding door glides smoothly on a spring loaded track for easy, one handed access to cabinet contents. It self-latches and self-closes, and is equipped with a fusible link to hold the door open during use and melts at 165°F (74°C) to automatically close door under fire conditions.

Self-Close

This style self-indexes, self-latches and self-closes to automatically shut doors upon release. Mechanism is concealed in the top wall, maximizing available shelf space. Fusible links hold doors open during use. In the event of a fire, fusible links will melt at 165°F (74°C) to automatically close doors.

All cabinet doors feature a continuous piano hinge for smooth operation, a three-point closure with keyed lock and a self-latching mechanism on all door styles.

DOOR HANDLE

Attractive, self-latching paddle style handle offers easy fingertip access to contents. Flush mounted design keeps aisles clear and reduces dangerous "catches" from passing traffic. Padlock tag offers added security and serves as a visual deterrent. Provides the flexibility of the lock being master keyed, keyed alike or keyed different for convenience.

WARNING LABELS

Strategically positioned labels warn others of cabinets contents and help firefighter to easily locate volatile liquids

TYPE OF CHEMICAL TO BE STORED

Using colour and labeling in your storage practices helps identify, organize and segregate liquids. It also helps fire department personnel recognize hazards when responding to fire situations.

PERFORMANCE TESTING

Cabinets are independently tested by FM Approvals Research and/or Underwriters Laboratories and built to OSHA/NFPA standards.

A SELF-LATCHING CABINET MAKES A DIFFERENCE!

A self-latching door and handle is critical as it does not require the user to manually rotate a handle to ensure the three-point latch is properly engaged. This is an important detail since an unlatched cabinet leaves the flammable contents exposed to a potential fire, where every single second of protection counts. A safety cabinet must be latched for it to perform according to code, providing maximum safety under fire conditions. A stainless steel bullet latching system offers optimum longevity with increased heat resistance.

A GUIDE TO EMERGENCY EYEWASH & SHOWER EQUIPMENT

Emergency showers, eyewashes and tepid water delivery systems are required to provide emergency treatment in preventing permanent eye and skin damage from accidental exposure to chemicals, biohazards or airborne debris.

In the absence of a uniquely Canadian standard for the design and placement of emergency eyewash and shower equipment, provincial authorities in all jurisdictions in Canada refer to the ANSI Z358.1 standard for recommendations and enforcement regarding emergency eyewash and shower requirements. We offer a comprehensive range of products and services to help comply with ANSI emergency shower and eyewash guidelines including site audits of existing or future installations to ensure compliance.

Emergency drenching fixtures must be readily accessible for use in manufacturing, laboratories, refineries, mines, construction sites and wherever workers may be accidentally splashed or sprayed with injurious solvents, acids, harmful particulates and, in some cases, biological hazards.

KEY REQUIREMENTS FROM THE ANSI STANDARD Z358.1 INCLUDE:

- Device must be positioned within 10 seconds (55') from hazard
- Device must activate in one second or less
- Device must be capable of delivering minimum flow of flushing fluid for at least 15 minutes*
- Device must provide "tepid" water (16-38°C, 60-100°F)
- Device must be activated weekly to remove dust/debris
- There must be no obstruction in the pathway to the device
- The water supply uninterruptible at the valve
- Device must be identified with highly visible signage
- Device must be well lit
- Device must be fully inspected annually (Contact us for support)

*** Because of the limited quantity of fluid they contain, supplemental eyewash devices alone (such as bottled eyewash) cannot meet the 15 minute flushing requirements in the ANSI standard. These should be used for initial first aid only to treat a patient during the path to certified eyewash. You should never substitute a fully compliant eyewash station with supplemental devices.**

Safety flushing devices are not a substitute for primary personal protective devices such as proper eyewear and clothing. Chemical MSDS' dictate proper first aid measures in case of accidental exposures.

Depending on site conditions and severity of the hazard, emergency eyewash and shower devices are found in various forms including:

- Plumbed-In
- Enclosed Safety Showers
- Portable
- Laboratory
- Tempering Systems
- Supplemental Devices

EMERGENCY EYEWASH & SHOWER EQUIPMENT

WATER TEMPERING PRODUCTS are designed to meet ANSI standard Z358.1 requirements to deliver "tepid" water to injured workers. In addition to discouraging use of a safety flushing device, a 15-minute deluge of cold water to the injured worker can negatively affect core body temperature, and hypothermia can result. Therefore, ANSI standard Z358.1 requires emergency showers and eyewashes to deliver "tepid" water. ANSI defines "tepid" water as 15.6°C to 38°C (60-100°F). Tempering solutions include steam, instantaneous (on demand) heaters and thermostatic mixing valves (TMV's). TMV's blend hot and cold water to meet strictly specified water temperature ranges.

EMERGENCY EYEWASH & SHOWER EQUIPMENT

PORTABLE EYEWASHES provide self-contained fluid where plumbed water is not available. Gravity-fed or pressurized portable eyewash systems should deliver the ANSI minimum 15-minute safety eyewash drench. To keep water stored in these portable systems safe for ophthalmic use, an antibacterial agent is included or available separately. These units often can be freeze protected for outdoor applications. Portable eyewash stations installed in temperatures below 16°C will need to be of a tempering design to maintain compliance with ANSI standard Z358.1

PF-CARDSTOCK TAGS

Tear-resistant and waterproof tags last longer than standard cardstock tags.

Tags are pulp-free – no wood pulp or paper content – unlike regular cardstock. They are pliable, yet will not rip or breakdown in moisture.

Tags do not tear readily when tugged on. Ideal for indoor use and short term outdoor exposure. The scuff-resistant, matte surface is easy to write on.

- 10-mil polyolefin-based material
- Thin and flexible
- Top has 3/8" plain hole

RP-PLASTIC TAGS & HS-LAMINATE TAGS

Durable tag withstands pulls and tears in dirt and grease environments.

Plastic tags are water-resistant – to withstand weather conditions.

The rigid plastic is flexible, yet will not readily break down over a wide temperature range. Good for indoors and outdoors use. Writable surface is abrasion resistant.

- 15-mil rigid plastic material
- Flexible, yet durable – withstands stretching and ripping
- Top has 3/8" hole reinforced with metal grommet to prevent pull off

HS-LAMINATE TAGS

Tags are designed to withstand tough and abusive conditions.

HS-Laminate is a composite of all poly materials hard sealed on both sides with no edge seams. Matte surface is scratch resistant, yet easy to write on. Waterproof tags are ideal for extreme weather conditions.

- Tear-proof, weather-proof, chemical-resistant material withstands dirt and grease environments
- Thick laminate stands up to abuse and rough handling
- 3/8" top hole is reinforced with a pull-proof, metal grommet

ISO SAFETY LABELS

- Communicate safety using internationally recognized labels as set forth by the International Organization for Standardization (ISO)
- Shapes and colours distinguish the type of safety
- Symbols communicate the specific safety message
- Adhere to documents, machinery, packaging and other areas requiring safety symbol messages
- Compliant to ISO 7010:2011 standard

High-performance, self-adhesive vinyl with overlaminated graphics for long wear and durability.
Available in two sizes — specify when ordering.

ISO labels are available in three categories distinguishable by their shape and colour format:

Mandatory - take action to avoid the hazard.

Prohibition - forbid an action to avoid the hazard.

Warning - identify the hazard to avoid.

PIPE MARKERS – WHAT YOU NEED TO KNOW

The proper marking of contents and flow direction in pipes and piping systems is a vital component of a thorough safety and identification program.

A13.1 – 2007 scheme for the identification of piping systems... A uniform system for the identification of piping contents has been established to warn personnel when the piping contents are inherently hazardous... This standard has been prepared to specify the identification of the contents of piping systems on the basis of legends, it also suggests the use of colour as a supplementary means of identifying the type of hazard of the material contained in the system. Pipe markers are designed to meet or exceed ASME (ANSI) A13.1-2007 recommendations for size, colour and visibility.

Pipe markers are quick visual cues, providing immediate identification information of pipe contents for emergency responders and workers to safely carry out their responsibilities when working in and around piping systems.

The legend or wording on the pipe marker is to be the primary means of naming the contents of the pipe. The name is to be brief, yet complete or in understood abbreviated format. Arrows are to accompany the legend to indicate the directional flow of the contents. Additional information may be necessary to identify the content details such as pressure and temperature.

Installation recommendations:

- Above or below centre visual line of pipe
- Frequent intervals on straight pipe runs (visible from any point along the length)
- Close to valves
- Near branches and T's in piping
- Any change in direction of piping
- Near points before and after pipe going through walls, ceilings, and floors

29 CFR 1910.253 Oxygen-fuel gas welding and cutting (d)(4)(ii) Aboveground piping systems shall be marked in accordance with the American National Standard Scheme for the identification of piping systems, ANSI A13.1

1910.261 Pulp, paper, and paperboard mills (a)(3)

General incorporation of standards. Establishments subject to this section shall comply with the following standards:

1910.261(a)(3)(ii) Scheme for the identification of piping systems, A13.1

1910.262 Textiles

1910.262(c)(7) Identification of piping systems. Identification of piping systems shall conform to American National Standard A13.1

LETTER HEIGHT & PIPE MARKER SIZES

The outside diameter of the pipe determines the letter height and background field length of the marker.

Outside Diameter of Pipe"	Length of Pipe Marker Colour Field"	Size of Letters"
3/4 to 1 1/4	8	1/2
1 1/2 to 2	8	3/4
2 1/2 to 6	12	1 1/4
8 to 10	24	2 1/2
Over 10*	32	3 1/2

*Available as custom pipe markers

LEGEND

The legend on the marker gives the name of the contents in full or abbreviated form. Arrows should be used to indicate direction of flow.

COLOURS

Colours identify the characteristic hazards of the contents of the piping system.

Contents of the Pipe	Colour
Fire Quenching Fluids	WHITE ON RED
Toxic And Corrosive Fluids	BLACK ON ORANGE
Flammable Fluids	BLACK ON YELLOW
Combustible Fluids	WHITE ON BROWN
Potable, Cooling, Boiler Feed, And Other Water	WHITE ON GREEN
Compressed Air	WHITE ON BLUE

VISIBILITY & LOCATION

Where pipe lines are located high or low, place the lettering below or above the horizontal centerline of the pipe. Affix markers onto piping close to valves or flanges and adjacent to changes in direction, branches, and where pipes pass through walls or floors; and at 25' to 50' intervals on long straight pipe runs.

Pipes installed at a distance may make pipe markers difficult to read (refer to the distance reading chart). We can provide larger, legible pipe markers to meet your requirements. Please contact us for solutions.
